Background

Mag.Net is a software development company, established in 2004 with team of five computer engineers. After three years of continuous effort this company has been very popular for its cost effective quality software products. Highly competitive professional background of the founder members and experience has been an important strength of the company to deliver economic quality products.

Now the company has developed a very high potential to deliver complex ICT solution of corporate level. It has successfully developed and implemented software solutions for prestigious government organization like Commission for the Investigation of Abuse of Authority, Padma Kanya Multiple College, Roads Board Nepal and more

Regarding our potential in development of software solutions and the increasing demand of the services world wide, we have enlarged the company to have a more experienced and strategic management to meet the envisaged new objectives of the company.

Mission

Our mission is to develop innovative cost effective, simple solutions to address the most common problems of the community, local government and other public sectors through information technology.

Vision

To develop the company as the most popular company of the nation for its high quality cost effective solution for Nepalese public sector through the use of information technology

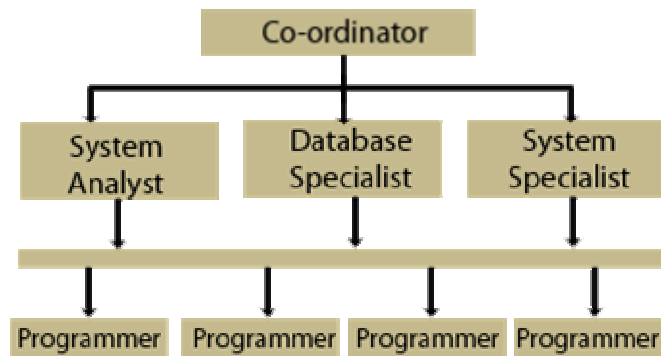

Philosophy

Information technology can address virtually all the problems of the governance problems which possible with simple and cost effective solutions. We are guided by the philosophy "LET US MAKE YOUR SYSTEM AND LET THE SYSTEM MAKE YOUR ORGANIZATION"

The Team

The new Mag.NET has a small but highly competent and dedicated team of ICT professionals. The team comprises a Coordinator, three sectional coordinators (Specialist) with specialization in their field and programmers who converts the idea into applications.

The organization Structure

Business Focus

Despite the tremendous potential of information technology to solve the contemporary social problems, it has been little used. Public sectors are falling behind to use information technology in their business. Our focus is to conduct research on the public issues and provide cost effective quality solution.

Regarding the teams' professional potential of software formulation and development and competitive advantage of software development in Nepal, our recent focus has been to extend our business into international software communities so that we can share our competitive advantages with their competitive advantage.

Area of Expertise

- Enterprise Resource Management Applications
- Organization wide management information system development
- Developing knowledge management systems
- Web Development and Content Management Tools
- Document Management Applications
- GIS based application development for local governance
- Research the organization nature through system analysis and recommend solution to address the organizational problems

We currently use the following software for our professional development works.

Operating Systems	Microsoft Windows XP/2000/NT/98
Languages	C/C++,C#, Visual Basic, VB.Net, Java
DBMS	Microsoft SQL Server, MySQL, , Oracle, MS Access
Internet/Intranet Technologies	XML/XSL, PHP, ASP.Net,JavaScript, Apache web server, Microsoft IIS server
Industry Industries	UML, ER Modeling

What makes us different from others?

We are guided by the philosophy of **Simple Living High Thinking**, We believe that staying in expensive buildings with large and redundant manpower does not necessarily ensure good quality products but increases the product's cost. We stay simple to produce cost effective quality solutions. Economic and quality software are always in high demand and such software can only provide a sustainable solution.

Simplicity, quality, cost effectiveness, and sustainable solutions are our focused characteristics.
